Based on Geological Studies, Indonesia is on the plate of the Earth's fire route, called the ring of fire, because there are many volcanoes that are inflict natural disasters that volcanic eruptions, tsunamis, earthquakes and other types of natural disasters. In another perspective this topographic makes Indonesia has a great beauty and has soil fertility. One of them is the earthquake that occurred at the end of July in Lombok, Indonesia with a scale of 6.4 SR and 7.0 SR, more than 500 fatalities and financial losses reaching Rp. 12.5 Trillion.

Disasters make sadness, also make relief action through NGOs that come with philanthropic functions, help for food, clothing and shelter and helping other programs to help affected victims. Social institutions are aggressively raising philanthropic funds that is zakat and sadaqoh, in other perspectives not many use waqf instruments as long-term philanthropic instruments for the recovery process in Lombok.

Waqf in a historical perspective has succeeded in making a civilization, disasters also make damage to a civilization, waqf can be an effective philanthropy instrument for rebuilding post-disaster. This research uses qualitative research methods using the LFA (Logic Frame Work) method to determine the linkages between program actions and the benefits of waqf-based programs for post-disaster rebuilding. This study uses a Lombok earthquake disaster case study with a qualitative approach, not only contains theoretical discussion but is based on field studies such as water waqf, rebuilding of agricultural equipment and other economic sources to create industrial village.
